Dear Sir/Madam,

We are very pleased to announce the 4th EADV Summer School on Clinical Research & Epidemiology, which will take place from 24-28 June 2019 in Rotterdam (The Netherlands). The aim of this excellent course is to stimulate high quality research across European dermatology by educating young and talented colleagues. The previous 'Clinical Research and Epidemiology' courses in 2012, 2014 and 2016 were a great success with very extremely high scores on the feedback forms from the participants.

The course is intended for dermatologists/residents/trainees, who have an interest in pursuing clinical and observational research in combination with their clinical efforts. Although the course covers a wide range of topics at different levels, we reach out to those who are in the beginning of developing their research skills. The 2019 course program covers:

- General issues in setting up RCTs and observational studies
- Performing critical appraisal topics (CAT)
- Practical sessions of data-management and analyses using SPSS
- Journal club
- State of the art lectures on large datasets in (pharmaco)epidemiology, genetic epidemiology and microbiome research in dermatology.

The aim of the EADV Fostering Trainee Education in Dermatology & Venereology Committee is to promote community, collaboration and exchange between (trainee) dermatovenerologists from all European countries. We will be very pleased if participants from various European countries are able to join this exciting course, which we believe is a worthwhile investment in their future. Therefore, we would like to ask you to include our course in the event calendar or forward this information to our target audience.
