

Questionnaire

European Observatory of Medical Demography

The European Observatory of Medical Demography was created in 2010 by the European Council of Medical Orders, the European Union of Medical Specialists and the European Federation of Salaried Doctors. The objective is to carry out a regular state of play of medical demography and of migratory movements. A first questionnaire was drafted in 2010.

Medical specialists	Men	Women
Private practice	13 %	10 %
Mixed practice	-	-
Employed doctors	87 %	90%

4 – Country of birth of medical specialists:
- Number of medical specialists born in your country: 6484
- Number of medical specialists born in another EU country: 1273

If possible, please indicate which EU countries in descending order: Germany, Sweden, Denmark, Poland, Iceland (EEA-country), Lithuania, Hungary, Netherlands, Finland

- Number of medical specialists born in a non-EU country: 277

If possible, please indicate which non-EU countries in descending order: Serbia, Iraq, Bosnia Herzegovina, Russia, USA

5 – Country of graduation of medical specialists:
-Number of medical specialists who graduated in your country: 5512
- Number of medical specialists who graduated in another EU country: 2194

If possible, please indicate which EU countries in descending order: Germany, Sweden, Denmark, Poland, Hungary, Ireland, Netherlands, Iceland (EEA-country), Lithuania

- Number of medical specialists who graduated in a non-EU country: 328

If possible, please indicate which **NON**-EU countries in descending order: Serbia, Iraq, Russia, Bosnia Herzegovina, India, Australia

6 – Do you know the number of medical specialists who left the country for the following reasons:

- free provision of services (temporary activity):

Yes No x

If so:

- number:

- list of countries:

- establishment (permanent activity):

Yes No x

If so:

- number:

- list of countries:

7 - Is there a shortage of medical specialists in your country?

Yes No x

If so, please specify the five main specialties:

1 -

2 -

3 -

4 -

5 -

III - Terminology

In your country, what are the criteria used to define a professionally active doctor?

The data are from the database of The Norwegian Medical Association, and includes members who are active and under 70 years of age. All members who are not medical students, retired og disabled, are defined as professionally active doctors.

What are the missions of a professionally active doctor?

According to the public authorities (SAK): « A doctor's principal area of work is the diagnosis and treatment of patients. Doctors must possess a good knowledge of medicine and have good interpersonal skills. As a doctor, you will be responsible for ensuring that the treatment you give treats your patients' complaints and provides relief. »

Thank you very much for your answer
